

IT TOOK 78 YEARS
TO PERFECT THE ART
OF PUTTING GLASS
BLOCK TOGETHER

POWER FLEX™

IT WAS WORTH THE WAIT

INTRODUCING POWERFLEX ...

PowerFlex means the end of handling pre-fab glass block windows as if they were delicate panes of glass.

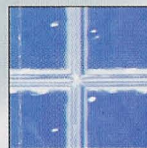

THE FIRST GLASS BLOCK WINDOWS TO BE BUILT LIKE GLASS BLOCK WINDOWS SHOULD BE

PowerFlex™ Windows are stronger ... virtually indestructible. They also provide better insulation since cold mortar joints are eliminated. All because PowerFlex™ was designed for use with glass block. You can see it in the superior bond and extra durability enjoyed by PowerFlex™ window owners. When it comes to Glass Blocks, there's really only one answer. PowerFlex™

For the first 78 years of life Glass Blocks were put together with mortar as if they were bricks. They aren't. In fact, mortar bonds poorly to glass.

Then some people began using silicones that were not designed for structural glazing. They gapped, peeled, yellowed and sometimes totally failed.

Finally, someone invented a joint compound designed just for glass block PowerFlex™, the most powerful, flexible and long-lasting bonding compound ever used between glass blocks.

This high-modulus adhesive is perfect for structural glazing. It provides the security, translucent beauty and lasting bond that no other joint material can supply.

There's never been anything like it.

- Stronger, longer lasting joints *than any pre-fab glass block window available.*
- Easier to handle and install. *Lighter. Virtually indestructible.*
- Better insulation. *No mortar to transfer cold.*
- Gap-free barrier keeps rain outside

Why you should use ONLY Power Flex™ Glass Block Windows...

POWER FLEX™

Power Flex™ Glass Block Windows are the ONLY Glass Block Windows made with Power Flex High Modulus Adhesive, specially formulated for the assembly of Glass Block Windows. Other sealants and adhesives just don't provide the strength and longevity of Power Flex. Power Flex Windows have a designed-in "give" that virtually eliminates breakage and provides a bonding to Glass Block that no other product can offer.

The inexpensive "look-a-like" windows available, are made with "off the shelf" sealants

that are NOT recommended for structural glazing and they have many problems: Low tensile strength, loss of insulation by joint deterioration due to low or no moisture resistance and the joints are subject to UV deterioration, discoloration, and leakage. Use of improper glazing sealants could cause catastrophic window failure. Power Flex Glass Block Windows are guaranteed or they will be replaced, to your site, at absolutely no cost whatsoever.

If it don't say POWER FLEX™...it ain't!!!

POWER FLEX™

Others...

- Adhesive Specially Formulated for Glass Block Window Construction
- Joint Tensile Strength 350 PSI
- Tear strength PPI 30
- Movement Capacity +/-25%
- Superior Temperature Resistant
- Ultra-high UV Resistance
- Better Insulation
- 8 Step Quality Control Process to meet Power Flex Standards
- Lifetime Warranty on all Vents
- Guaranteed- Pick-Up to Installation

- Unknown Material used for window construction
- Joint Tensile Strength ???
- Tear strength PPI ???
- Movement Capacity ???
- Temperature Resistant ???
- UV Resistance ???
- Potential Leakage
- No Certified Construction Process
- Inexpensive Vents
- Guarantee ???

Authorized Dealer

POWER FLEX™

The Next Generation of Glass Block Windows

Unlike old fashion mortared panels Power-Flex Glass Block Windows are made with a space age bonding sealant, engineered specifically for the fabrication of Glass Block Windows.

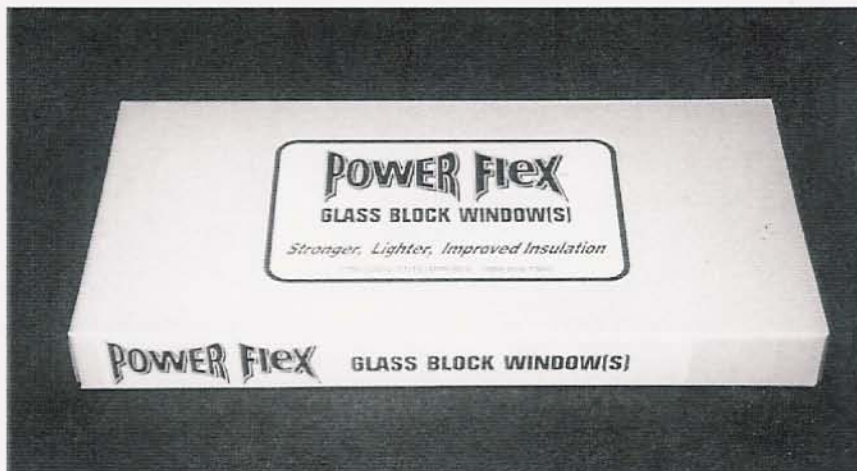

The End Result:

- A Revolutionary New Product
- Better than anything currently on the market
- Competitively Priced
- Consumer Friendly
- STORE FRIENDLY

Power-Flex Windows use STARFLEX Premium Quality Vents

Virtually eliminates every problem related to warehousing, displaying, and transporting of Glass Block Windows. Power-Flex Glass Block Windows are GUARANTEED not to come apart from shipping to job site or they are replaced FREE.

Individually boxed for easy display and transportation

Patterns:

- Wave •Large Diamond*
 - Diamond •Clear
